Allowable Subject Matter

Claims 1-20 are allowed.

The following is an examiner's statement of reasons for allowance: Applicants' response filed 26 April 2004 demonstrates support for the claim amendment reciting impregnation of porous YSZ with a metal-containing salt solution comprising an electron-conducting metal having an oxide form which melts at a temperature less than about 1550 °C. The limitation of a metal having an oxide form which melts at a temperature less than about 1550 °C overcomes the 'X' references to Anil V Kirkar, US Patent 5 843 239 August 1996 and Scott Barrett et al., US Patent 5 656 387. Both of these patents are directed to anodes having nickel in a porous fuel cell anode structure, and the melting point of NiO is about 1955 °C and the melting point of Ni₂O₃ is about 1984 °C. See Knovel Critical Tables.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
